

Your collection. Your music.

Musikregal for Windows: keep your media collection organised. The 45-day demo offers all currently available Pro features for testing with your own data.

Keep your collection organised

Record CDs, vinyl, singles, maxi singles, cassettes, reel tapes, MiniDiscs, videos and books; keep your own numbers and shelves.

Covers and information

Manage front, back and inside images. Review online information deliberately and link it to suitable media.

Search and voice features

Find recorded media and tracks. Eight interface languages and existing voice features support everyday use.

Backup and exchange

Back up, restore, import and export the collection. Keep your own data and confirmed links traceable.

Possible future options

Digital music and player

Manage and play MP3/WAV; queue, playlists, favourites, genre/language choices and adjustable crossfade.

Flexible music sources

Your own primary and fallback sources, search index and updates for new files, including reachable network storage.

Quality and duplicates

Review bitrates and possible duplicate recordings; use review lists instead of automatic audio-file deletion.

See media together

Compare physical editions with digital locations; show source availability and known bitrates separately.

Possible VMA plans: local smartphone music and WLAN access to freely configured network/Drobo sources and fallback sources. Not included in VMA 1.2.1.0. Network music files are read only; the index, favourites, lists and access settings stay on the smartphone.

Optional paid service: build a collection from an Excel list or prepare an import file. Price not yet set.

Possible options, scope and eventual packaging are not final. Prices and activation on request.

45 days with all available Pro features

A fresh demo starts empty. It loads 100 fictional sample items only when explicitly requested; audio files are not included. Choose your own music folders. The eventual base package and possible optional music extensions will be specified in the offer. Prices and activation are available on request.

After 45 days, adding media items, printing, music playback, music scans, editing the music index and voice features require an appropriate active licence. Your existing media collection remains available for queries, editing, deletion, export and backup. After expiry, import and restore cannot create additional entries either. An existing suitable activation is retained during a program update; the trial period does not restart.
